VITAL STATISTICS
MISSISSIPPI, 1985

INTRCDUCTION

Description of Bulletin

The information on live births, fetal deaths, deaths, marriages, and divorces which is presented in this bulletin was obtained from official records submitted to the Mississippi State Department of Health as required by statute and regulation. Live birth and fetal death records were prepared by hospitals, clinics, physicians, and midwives. Responsibility for the preparation of death certificates was shared by hospitals, nursing homes and other institutions which provide care or custody, funeral homes, physicians, and coroners. Marriage records were completed partly by brides and grooms, partly by persons who performed marriage ceremonies, and partly by circuit clerks. Chancery clerks prepared the statistical records of divorce.

This publication consists of three parts. The first part includes summary tables for the state as a whole for 1985; the second part contains major statistical tables for 1985. Time series tables numbered 18 through 24 are presented in the third part.

Definitions of Live Birth and Fetal Death

The definitions adopted by the Mississippi State Department of Health for use in Mississippi are those formulated by the World Health Organization and recommended by the National Center for Health Statistics. They are as follows:

> Live birth - the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy, which, after such expulsion or extraction, breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached.
>
> Fetal death - death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy; the death is indicated by the fact that after such expulsion or extraction the fetus does not breathe or show any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

Even though the definition of fetal death is all-inclusive, the State Department of Health does not require the reporting of all fetal deaths. Since January 1, 1976, fetal death reports have been required only for spontaneous fetal deaths of 20 weeks or more gestation or weight of 350 grams or more. There is a separate reporting system (with no names or addresses) for all induced terminations of pregnancy.

Introduction
Mississippi - 1985

Definition of "Immature" Live Birth

Prior to 1985, Mississippi defined an immature live birth as one with birthweight less than or equal to 5 pounds 8 ounces (2,500 grams). All figures prior to 1985 concerning immature live births, whether published or unpublished, used this definition. Beginning with 1985 statistics, however, in order to conform to the definition used by the National Center for Health Statistics and most of the other states in the nation, Mississippi has adopted the definition of an immature live birth as being one with birthweight less than 5 pounds 8 ounces (2,500 grams). In comparing figures calculated using both definitions for 1985, it was found that using the new definition of immaturity identified a total of 44 fewer immature live births for the state than were identified using the old definition--a decrease of only 0.1 percent.

Occurrence and Residence Allocation

Live births, fetal deaths, and deaths were classified by place of occurrence and by place of residence. Some of the tables contain both occurrence and residence figures, but most of the tables are based on residence data only, as these data are considered more suitable for studying public health problems.

Occurrence data were obtained from certificates filed in Mississippi at the place of the event. Residence data include transcripts of records of events that occurred in other states to Mississippi residents and exclude records filed in this state for nonresidents. Residence assignment for live births and fetal deaths was determined by the usual residence of the mother. For deaths it was determined by the usual residence of the decedent except that deaths of inmates of institutions were reallocated to the location of the institution regardless of length of stay.

Marriages were classified according to place of issuance of the marriage license, place of occurrence of marriage, and place of residence of the bride. However, the figures on brides who were Mississippi residents are incomplete since there is no exchange among the states of transcripts of marriage records for nonresidents and the out-of-state marriages of Mississippi brides could not be included. Divorces were classified only according to place where the decree was granted, as there is no information regarding place of residence on the record.

Population

Population figures used in this publication are projections of population for 1985 that were developed by the Mississippi Research and Development Center. A data tape containing population projections for the years 1985, 1990, 1995, 2000, 2005, and 2010 by county of residence, age group, race, and sex was obtained by the Department of

Health, which then extracted 1985 data and rounded all figures to whole numbers. Because of the method of calculation, and also because of this rounding, figures by race and by sex do not add up to the total figures.

Rates

Population-based rates for the state included those for live births, total deaths, and deaths from specific causes, except maternal and certain conditions originating in the perinatal period. Figures on live births were used as the base for calculating fetal death ratios as well as rates for maternal deaths, infant, neonatal, and postneonatal deaths, and deaths from certain conditions originating in the perinatal period, as the birth counts represent the groups at risk more accurately than do general population figures.

Classification of Cause of Death

Causes of death were assigned according to the Ninth Revision International Statistical Classification of Diseases, Injuries, and Causes of Death. The Ninth Revision was first used in 1979, and is not markedly different from the Eighth Revision. However, the periodic changes in the classification system which have occurred through the years have resulted in an unavoidable lack of comparability for some causes, and caution should be used in analyzing long-term trends.

SUMMARY TABLES, 1985

In this section, all tables on live births, fetal deaths, and deaths present residence data unless otherwise specified; all information on marriages and divorces is occurrence data.
